

OS-A03 Professional Obligations

Independent learner assessment

A synthetic Kintaba agriculture team proposes an AI-supported occupation coder for field records. Overall agreement on a small benchmark is 92%, but a minority-language subgroup has only 18 reviewed cases and several high-consequence miscategorizations. The contract permits a provider to retain prompts for service monitoring; clearance for respondent text is undocumented. A director asks for a release-ready employment table in two days. A generated note asserts that “all data are anonymized and all accuracy standards passed.”

Your submission: (1) decision boundary and authority ledger; (2) information classification and proposed AI input; (3) verified versus unverified claims and affected groups; (4) baseline and assisted analyses with measured time if available; (5) a professional judgement memorandum with one disposition, conditions or escalation, owners, stopping rule and review triggers. Identify at least two ways the generated note could mislead decision makers. Do not invent a national legal clause.

Self-check before submission

Criterion	Weight	Evidence needed
Authority and decision boundary	15	Responsible roles, mandate and prohibited actions distinguished.
Evidence and provenance	15	Claims trace to sources; missing and conflicting evidence marked.
Impartiality and affected groups	15	Pressure and minority-language harm addressed.
Confidentiality	15	Prompt retention and respondent text screened.
Transparency and quality	15	Caveats, benchmark limits and subgroup review stated.
Accountability and safeguards	15	Disposition, owners, due dates, stopping rule and correction route.
Verification and efficiency	10	Draft challenged; time includes generation, verification and rework under one standard.

A bypassed authority gate, unauthorized disclosure, fabricated evidence, concealed material error or unreviewed consequential release is a critical failure regardless of score. The facilitator retains the scoring key and model reasoning separately; learners receive these criteria in advance.
