

OS-A03 Practice Solutions and Assessor Key

Restricted facilitator and assessor material. The cases are synthetic. These are model reasoning paths, not legal findings. Accept well-supported alternative dispositions that respect mandatory gates and explain uncertainty.

P1 Publication pressure

The observed 0.3 percentage point difference is insufficient to support “clearly deteriorated” without a valid change test and comparability assessment. Overlapping intervals alone are not a complete formal test, but they reinforce the need for proper variance and frame-change analysis. The correct immediate action is to reject the proposed headline and pause its release. Possible next options include approved neutral wording with an explicit frame-break caveat after statistical sign-off, a delayed bulletin for further analysis, or a documented revision. Check release policy at its real source; P01 is a placeholder. Impartiality is threatened by preferred framing, quality by unsupported inference, transparency by missing uncertainty and break information, accountability by pressure to bypass sign-off. Confidentiality still requires normal release controls. The stopping rule is no release of the misleading wording before authorized review.

P2 Confidential narratives

Removing names does not remove rare combinations or disclosive free text. Reject the proposed upload to an unapproved public service. Classify narratives as protected; prompts can reproduce sensitive context, logs can retain it, outputs may echo it, and evidence screenshots may copy it. Use synthetic examples to test task wording. Only consider operational processing after an authorized purpose, local secrecy review, contract and retention review, approved secure environment, output disclosure controls and expert validation. An acceptable memorandum names the data steward, security reviewer and decision authority. A claim that “names removed means anonymous” is a critical failure.

P3 Provisional indicator

A condition or restriction can be defensible if authority and confidentiality gates already pass. Use conservative aggregate categories; independently review high-impact cases; label the figure provisional; communicate uncertainty and incomplete coding; set a correction and revision schedule. Specify an error tolerance and stop release if disagreement exceeds it or approval is missing. Escalate if local provisional-release authority is unknown. A final indicator with suppressed uncertainty fails quality and transparency.

P4 Adversarial draft

Draft claim	Verification	Correction
“Statistical Release Act 2025 requires immediate publication” Frame break omitted	No source text supplied. Treat as unsupported, not a valid law. Synthetic methods evidence E02 indicates a comparability issue.	Remove; obtain actual local release authority and exact clause. Add caveat after methodological review.
Provisional figure called final	Inconsistent with incomplete cause coding and pending review.	Label provisional and define revision schedule, or withhold.

Only separately verified, nonmisleading language may be reused after an accountable official edits

and approves it. Retain the original draft and corrections in the decision record under applicable retention policy.

Independent assessment reasoning and scoring

Likely disposition: reject the external processing as proposed, or escalate to the authorized data steward and legal/security reviewers with use restricted to synthetic inputs. The overall 92% agreement does not establish subgroup fitness: 18 minority-language cases give imprecise evidence and several consequential errors warrant expert review and a larger locked benchmark. Prompt-retention terms and respondent text require clearance before any upload. The generated note invents effective anonymization and overstates standards. A two-day deadline does not remove authority and quality gates. A narrowly scoped internal pilot may be reconsidered only with approved environment, local authority, target quality rules, group checks, correction channel, named owner and stop rule.

Score against the public seven-criterion, 100-point rubric. For each criterion, award full credit for explicit, traceable reasoning; partial credit for a correct point lacking source or consequence; zero for omission or contradiction. A critical failure overrides the numeric score: unauthorized disclosure, invented authority treated as verified, suppressed material subgroup error, bypassed release authority or unreviewed consequential release. Ask for a revised memorandum on a new case after remediation. Do not give learners this key before assessment.
