Transparency				
Quality				
Accountability				

Memorandum

Decision requested:

Verified facts and uncertainties:

Authority, delegation and escalation:

Information handling and excluded material:

Analysis of five obligations:

Options, including non-action and narrower use:

Independent checks, counterarguments and corrections:

Disposition: accept / condition / restrict / reject / escalate

Rationale and residual uncertainty:

Safeguards, owner, due date and completion evidence:

Stopping rule, review date and correction route:

Baseline and assisted time, verification, rework and quality result:

Approval record and version:

Gate checklist

- ☐ Mandate, local policy and decision authority verified.
- ☐ Inputs, prompts, logs, retrieval and outputs screened.
- ☐ Each material fact independently traced or labeled unresolved.
- ☐ Statistical quality threshold and affected subgroup checked.
- ☐ Material AI assistance, limitations and revisions recorded.
- ☐ Reviewer can inspect, override, stop and correct.
- ☐ Every safeguard has an owner, deadline and completion evidence.
- ☐ Both workflows pass the same quality standard before any time-saving claim.
- ☐ Authorized person approved the action and set a review trigger.

Review triggers: change in law, supplier terms, source data, model or prompt, observed error, intended use, affected group or incident. Reopen the decision record when a trigger occurs.
