

OS-A03 Professional Obligations

Practice exercises and learner assessment

All Kintaba cases below are synthetic. Any statute or institutional clause needs local verification. Submit a memorandum and evidence ledger, not a model-generated answer.

P1 Publication pressure

A quarterly labour estimate is 12.4% after 12.1%. The uncertainty intervals overlap and the sampling frame changed. A manager asks for the AI headline “Employment clearly deteriorated.” Identify the five obligations; mark the unsupported claim; propose at least three options including delay; name the release authority and a stopping rule. Produce a one-page memorandum.

P2 Confidential narratives

A mortality coding file has no names but contains rare villages, occupations and unusual events. A public AI service has no approved retention terms. Classify input, prompt, service, output and retained evidence. Draft a safe task specification using synthetic examples and explain which approvals would be required for later restricted processing.

P3 Provisional indicator

Cause coding is incomplete during an outbreak. An approved secure environment exists. The proposed aggregate would support urgent planning but high-impact cases lack expert review. Decide whether to condition, restrict, reject or escalate use; state the quality gate, uncertainty language, correction route and review date.

P4 Adversarial draft

An AI draft says “The Statistical Release Act 2025 requires immediate publication,” removes a frame-change caveat and labels a provisional figure final. No act text is provided. Create a claim-by-claim challenge table with source, verification status, correction and person responsible. Explain whether any part of the draft may be reused.
